A-Series FreeForm™

... the freedom to print attractive, high definition codes of exceptional quality

Specifically designed to produce free-flowing, curved characters, A-Series FreeForm™ combines the reliability of inkjet technology with the sophistication of near letter quality print.

The result is a first class code that will enhance product packaging.

Using a technique that allows drops to be placed with greater accuracy and density, A-Series Freeform™ has overcome the challenge of producing curves within a traditional inkjet matrix, making free-flowing, superior definition codes a reality.

The "close-up quality" appearance of A-Series FreeForm™ means it is ideal for industries where attractive packaging design is essential such as cosmetics, luxury perfumes, pharmaceutical, food and drink and cable & wire, where legibility is crucial.

But the freedom doesn't end here. A-Series FreeForm™ is available in a wide range of inks to suit your application. These include:-

- ◆ fast drying inks with excellent adhesive properties
- ◆ a variety of colours for contrast on coloured surfaces
- ◆ invisible security inks for the pharmaceutical and luxury cosmetics industries
- ◆ low or no odour inks for printing directly onto food or food packaging
- ◆ durable inks for non-porous surfaces
